

2025-2026 Respiratory Vaccine Recommendations

	Annual Influenza Vaccine 	RSV Immunization 	Annual COVID-19 Vaccine 
Infants and Children	All children 6 months and older. <i>Some children 6 months through 8 years may need multiple doses.</i>	All infants under 8 months and children 8 through 19 months with risk factors. <i>Typically administered October through March, if not received during pregnancy.</i>	All infants and children ages 6 months through 23 months, and all children ages 2 years through 18 years with risk factors, and any child over 6 months whose parents would like them to be vaccinated.
Pregnancy	All. <i>At any point in pregnancy.</i>	32 through 36 weeks gestation. <i>Pfizer, Abrysvo only. Typically administered September through January.</i>	All. <i>At any point in pregnancy.</i>
Adults 18 to 50	All.	Not applicable. <i>If pregnant, see above.</i>	All. <i>Especially important for people with risk factors or who have never received a vaccine.</i>
Adults 50 and older	All. <i>High-dose, recombinant or adjuvanted flu vaccine preferred for 65 and older, if available.</i>	All those 75 and older, and adults 50 through 74 with risk factors. <i>One lifetime dose of RSV vaccine.</i>	All. <i>Especially important for people with risk factors or who have never received a vaccine.</i>

For more information on respiratory season vaccines, including details about the 2025-2026 Food and Drug Administration approval for these vaccines, visit Michigan.gov/COVIDFluRSV. The MDHHS COVID-19 vaccine guidance aligns with the guidance from the [American Academy of Pediatrics](#), the [American College of Obstetricians and Gynecologists](#), the [American Academy of Family Physicians](#) and the [American College of Physicians](#).

If you have not already received your 2025–2026 COVID-19 vaccine, you may consider yourself high risk when answering screening questions.

As a reminder, speak to your health care provider about the vaccines that are recommended for you.
